Sequence 19, Patent No. 5

Application US/08253877C 5773001

GENERAL INFORMATION:

APPLICANT:

Hamann,

Philip R.

APPLICANT: APPLICANT: APPLICANT:

Hinman, Lois
Hollander, Irwin
Holcomb, Ryan
Hallett, William
Tsou, Hwei-Ru
Weiss, Martin J.

INVENTION:

Conjugates of Methyltrithio Antitumor

                                                                                                                                                                                                                                                                                                                                                                                                constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M131, by PCR amplification using primers AAQ78917-38. The genes are subdivided into 5 families of Vh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially digested with TaqI restriction enzyme. The fragments were separated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments were ligated with ClaI-digested cosmid vector pJB81. The ligation products were in vitro packed and infected into E.coli 490A. The fragments were then subcloned by colony hybridisation. The Vh genes and the DNA fragments encoding them are useful in producing human immunoglobulin in mammalian hosts.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC molecule, a construct or fragments or a construct of a fragment with CC enhanced binding characteristics which selectively and/or specifically CC enhanced binding characteristics which selectively and/or specifically CC binds to a target cell in favour of other cells, where binding is CC primarily determined by a first hypervariable region and Fv is a single CC chain Fv (scFv) or a disulfide Fv (dsFv). The peptide, optionally in CC association with or attached, coupled, combined, linked or fused to a CC pharmaceutical agent, is useful in the manufacture of a medicament, where CC the medicament has activity against a diseased cell, preferably a cancer CC cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma, CC myeloma, blastoma, seminoma, and melanoma, where the leukaemia cell is an CC composition for use in inhibiting the growth of a diseased or cancer CC cell. This sequence represents a human Fv molecule hypervariable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

```

hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents the human factor VIII antibody A3-C1 specific scFv protein DP-15 which is used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ક
and neutralises a matrix metalloprocease (MMP)-inhibiting activity of TMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and a variable light chain (VLC)DR3 region. An antibody preparation of the invention has heparcotropic, cytostatic, nephrotropic and cardiant cardianty. The human antibody is useful for decreasing an MMP-inhibiting activity of a TIMP-1. It is especially useful for ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, alcoholic liver disease, cardiac fibrosis, acute coronary syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic pulmonary fibrosis, benign prostate hypertrophy, lung cancer or colon cancer. The antibody is also useful for detecting a TIMP-1 in a test preparation, or in diagnosing a disorder in which a TIMP-1 level is elevated. The sequences shown in ABRO1502-ABRO1545 represent the heavy chain regions of a human anti-TIMP-1 antibody of the invention.

The present invention describes a composition (I), comprising a compositide comprising an antibody-based antigen-binding domain of human composition with binding specificity for an antigen expressed on the suppressor of immune response, and the IC50 for the suppression of immune response is 1 microM or less. (I) has cantidabetic, antiarthritic, neuroprotective, antinflammatory, cantithrematic, antiarthritic, neuroprotective, antinflammatory. Can be used as a suppressor of immune response. (I) has cantidabetic, antipsoriatic, immunosuppressive, dermatological, antithyroid, nephrotropic, thyromimetic and hepatotropic activities, and can be used as a suppressor of immune response. (I) is useful for suppressing activation or proliferation of a cell of the immune system, appressing the secretion by a cell, the interaction of a cell of the immune system, can be used as a suppressor of immunosuppressing a patient and for can be used as a suppressor cell, immunosuppressing a patient and for cell mune system with another cell, immunosuppressing a patient and for cell immune system or cell immunosuppressing a patient and for cell immunological mechanisms are needed to cause or lead to the killing. (I) optionally linked to cytotoxic or immunogenic agent) is useful for preparing a pharmaceutical preparation for the treatment of rheumatoid arthritis, multiple sclerosis, grave's disease, insulin-dependent diabetes, narcolepsy, psoriasis, systemic lupus crythematogus, ankylosing spondylitis, transplant rejection, graft versus host disease, Hashimoto's disease, myasthenia gravis, pemphigus vulgaris, cell haby2469 to ABB27474 and ABB57457 to ABB57590 represent sequence used in the exemplification of the present invention.
Composition for suppressing immune response, treating diseases immune system, has polypeptide comprising antibody-based antigen-binding domain of human composition, which binds antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expressed on a cell surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2002-075289/10.

BLyS is a member of the CC tumour necrosis factor (TNP) super family and induces B cell CC proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC antitheumatic and antiAIDS activity and can be used in vaccines to cinhibit the expression and activity of BLyS. The antibodies bind to BLyS conditions are also be used to detect and quantitate the presence of BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC biological samples and may be used in this way to diagnose disease CC associated with aberrant expression of BLyS. They may also be CC administered to treat diseases associated with aberrant BLyS expression CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, CC immunodeficiency (e.g. common variable immunodeficiency (cVID) and CC acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent CC the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoglobulin fragments specific for HLA-Cw6. The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; antibody; tissue inhibitor of metalloprotease-1; TIMP-1; VLCDR3; matrix metalloprotease; MMP; variable heavy chain; VHCDR3; hepatotropic; variable light chain; cytostatic; nephrotropic; cardiant; liver fibrosis; alcoholic liver disease; cardiac fibrosis; acute coronary syndrome; lupus nephritis; glomerulosclerotic renal disease; lung cancer; idiopathic pulmonary fibrosis; benign prostate hypertrophy; colon cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human anti-TIMP-1 antibody heavy chain #12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the introduces and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes novel antibodies that immunospecifically bind B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1;

The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, seastcointestinal disorders, munds, renal disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC This invention describes novel antibodies that immunospecifically bind to CC B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNP) super family and induces B cell CC proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC antirheumatic and antiAlDS activity and can be used in vaccines to CC inhibit the expression and activity of BLyS. The antibodies bind to BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC biological samples and may be used in this way to diagnose disease CC associated with aberrant expression of BLyS. They may also be CC administered to treat diseases associated with aberrant BLyS expression CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, CC immunodeficiency (e.g. common variable immunodeficiency (CVUD) and CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, CC the antibodies and fragments of the antibodies described in the method CC of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

(I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents a fragment of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain variable region protein Bis of the human factor VIII antibody heavy chain vari
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY50959 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human FVIII antibody A3-C1
This invention describes a novel polymucleotide (I) (and complements and hybridizable polymucleotides) comprising a contiguous nucleotide sequency coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the
                                                                                                                                                                                                                                                                            New polynucleotide, polypeptide and antibody useful for diagnosing presence of neutralizing antibodies against factor VIII and for treatment of hemophilia A patients with these antibodies -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18-NOV-1999
